DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 20-24, 26-27 and 30-35 have been considered but are moot in view of the new ground(s) of rejection. Upon further search and consideration the objection to claim 27 is withdrawn and claim 27 is now rejected, therefore this action is non-final.

Election/Restrictions

Newly submitted claim 35 is directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: the polymer valve of claim 35 is a different distinct invention to that originally claimed porcine stentless valve and would require different search criteria. However, claim 20 is generic to claim 35, therefore claim 35 will be rejoined when claim 20 is patentable.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claim 35 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 20, 23-24, 26-27 and 30-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ross (5,089,015) in view of Hart et al (5,827,298). Ross discloses a method for attaching a stentless porcine heart valve prosthesis comprising inserting fasteners (sutures) through the prosthesis into an aortic wall (col. 4, lines 16-26), the prosthesis comprising leaflets with reinforced valve commissures (Fig. 2B) However Ross does not disclose the fastener having a head and barbed tip. Hart et al teaches the use of a fastener having a head and barbed tip (e.g. Fig. 44). It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the teaching of a fastener having a head and tip, as taught by Hart et al, to a method as per Ross, the fasteners of Hart et al being capable of connecting vascular tissues or implants to tissues (col. 12, lines 33-63) in situations where the use of sutures would be more difficult (col. 1, lines 11-20).

Allowable Subject Matter

Claims 21-22, and 34 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
